

ABOUT

Our decorative WetArea Panels are specially designed for use in wet areas like Bathrooms, Laundries and Kitchens, but can be fixed anywhere in the house or office where temperatures do not exceed 60 degrees celsius. The panels are made of high grade PVC material in sheets of 2400 * 1000 mm and are 10 mm thick - so perfect to fit most rooms with each panel from floor to ceiling.

Our WetArea Panels:

- are 100% Waterproof and Mould Resistant
 - No grout means Easy to keep Clean
 - Very Quick Installation compared to alternatives like Tiles
- Can be fitted to almost any surface including over existing tiles, plaster boards, concrete walls, brick, etc
 - Choose from a beautifully decorated range of 16 colours in gloss or matt finish
 - 10 Years Replacement Warranty
- The watertight tongue and groove click system makes joining panels to one another super easy for an almost seamless finish. The corrugate extruded structure makes it light to work with, yet sturdy despite its size. The installation can be done as a DIY project or by most tradesmen. Only common tools needed.
- The lacquered (UV treated) surface of the panels enables the panels to be easily cleaned with a damp cloth.

INSTALLATION

WetArea Panels feature a tongue and groove joint which provides a tight waterproof fit and an almost seamless joint between panels.

They could be easily glued onto the wall or simply over existing tiles.

Several YouTube Videos can be found on how to install Wet Wall Panels, for example:
